voran WASHING & MILLING MACHINES WITH ELEVATOR.

These machines are designed to wash fruit and deliver it milled directly into the press, freeing the cider and juice maker from the labour of shovelling or pumping pomace. The machine consists of a washing bath with dirt screen and overflow, auger elevator with built-in rinser and a mill which discharges through a perforated screen. The supply of apples to the mill is automatically regulated by a pressure sensor fitted either in the pomace hopper of the mill or at the belt press inlet. The machines are compact and built throughout from stainless steel.

Elevator SA – with capacity of up to 1 tonne per hour. For use with the EBP350 belt press or for other applications where an exposed elevator is an advantage – e.g. where soft fruits are to be processed. Mounted on wheels for ease of movement. Available with or without a mill.

Elevator SA

WA/LC

WA/LC with capacity of up to 2 tonnes per hour is available in different specifications suitable for each application.

WAR 65

WAR 65 with capacity up to 12 tonnes per hour.
