What makes Speidel tanks so good?

tel: 01404 892100 email sales@vigold.com www.vigold.com

25 Year Guarantee

Speidel tanks are guaranteed for 25 years* and drink producers who use them know why. There are many reasons why Speidel guarantee their tanks for so long. Read on for the top reasons ...

(* Excludes pressure tanks due to the statutory requirements of the Pressure Equipment & Systems Regulations - please enquire.

outokumpu

Quality Stainless Steel

Made from high quality, fully certified Outokumpu stainless steel. The stainless steel on Speidel tanks is generally thicker than the steel found on cheaper brands of tank. Tank walls/bottom: AISI 304; top AISI 316, as standard. AISI 316 throughout is available on request.

Global leader of stainless steel production, founded in 1910; acquired ThyssenKrupp in 2012

Made in Germany

Speidel has been manufacturing tanks in for over 100 years. All their tanks are manufactured to their exacting standards in their factory in Offerdingen, Germany.

'Minimal Air' Vent/Top Design

The vent is positioned at the front of the tank for easy access and visibility. The top panel is made from higher grade AISI 316 stainless steel and is designed to ensure a full tank has a very small air contact area.

Very Easy Clean Inner Surfaces

Highly polished, mirror finish (llld 2R), smooth-as-glass inner surfaces mean easy cleaning, which can reduce chemical costs and labour costs. The smooth finish also means there is no 'key' for tartrate crystal formation.

One-piece Top & Bottom Panels

The top and bottom panels are made from one-piece of moulded stainless steel, avoiding the dirt-traps associated with welded conical plates. The V channel extends from beyond the centre of the tank to ensure complete venting and total draining.

Renowned Welds

Speidel's laser-welds are smooth (never welded then ground down/polished) and continuous, minimising dirt-traps and tartrate crystal formation.

Strong Legs/Stability

To ensure stability, Speidel tanks have strong, wide, welded stainless steel legs; and Speidel large capacity tanks have fully enclosed legs and dished bottoms.

Seamless Door Opening

The manway opening is seamless (moulded from tank wall), so there are no welds, minimising dirt-traps. Supplied with Speidel manufactured seamless doors for a secure closure.

Total Drain Outlet

The V channel and bottom outlet is seamless (minimising dirt-traps) and provides direct access at the front of tank. It extends from beyond the centre of the tank to ensure total draining.

Heating/cooling Jackets

The external heating/cooling laser-welded jackets are available in multiple positions for effective temperature control. They are pressure resistant up to 6 bar.

Fill Level

The fill level sight glass has an isolating valve and drain, and is protected by a metal strip with a litre scale.
