

**Automatic
Filling Lines**

Equipping the Nation's Drink Producers

THE RANGE

CIMEC manufacture a large range of machines for bottling liquids in glass, PET and PVC bottles. Their range includes:

- Stand-alone fillers
- Monobloc machines with filler & capping/corking functions
- Tribloc machines with rinser, filler & capping/corking functions
- Quadbloc machines with rinser, filler, corking, & wire muzzle application functions

All CIMEC machines are CIP (Clean In Place) compatible and we can supply a full CIP system if required.

PEACE OF MIND

A successful filling solution is not only dependent on the filling machine itself, but also on its seamless integration in-line and full, on-going technical support. We will issue you with a comprehensive quotation outlining our recommendations and optional accessories. Where a complete line is required, we survey your site, offer advice, and provide CAD modelling to guarantee smooth project delivery.

Our management of your project begins from the day you place your order and includes installation, commissioning and comprehensive training of you or your staff by our team of multi-skilled engineers. We are proud to offer an unrivalled level of technical backup and support throughout the lifetime of your line, including:

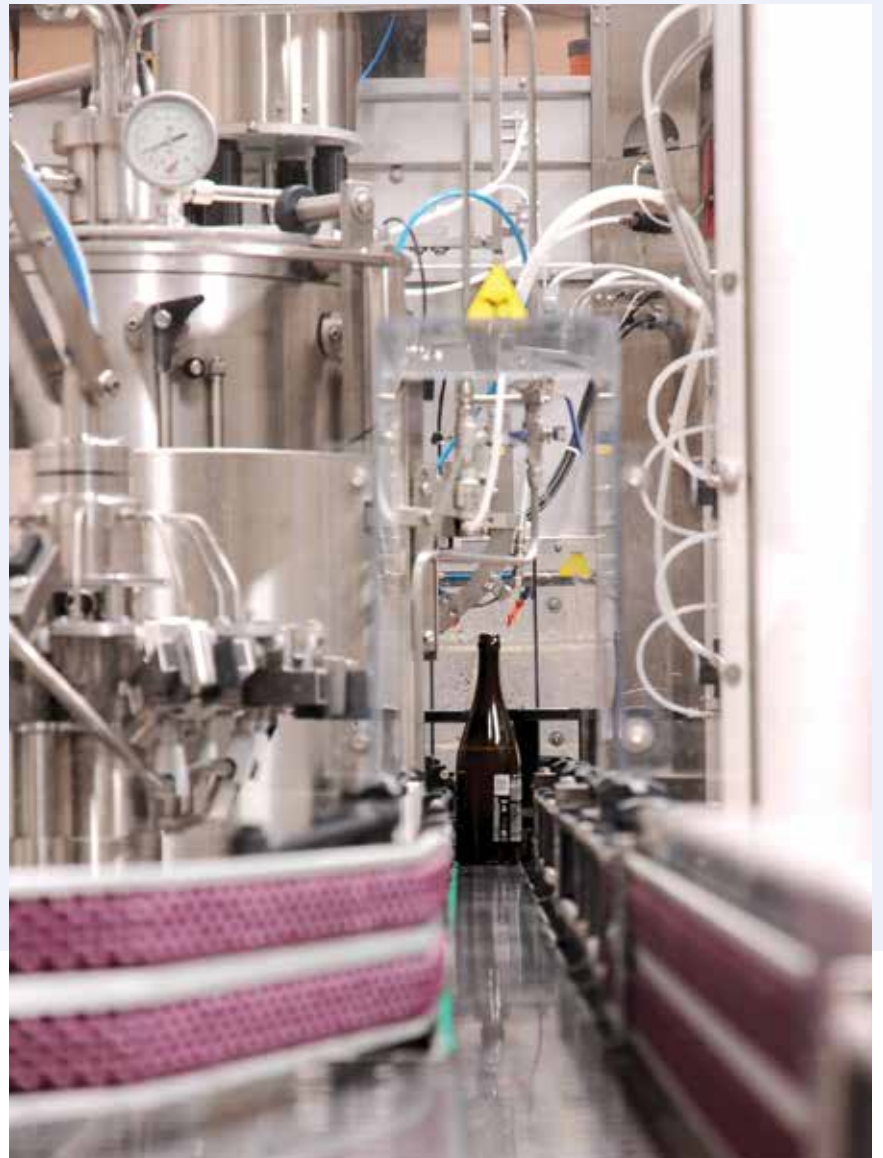

- 3 year parts warranty & 2 year labour warranty
- Support from our team of experienced engineers
- Rapid response call out or phone support should you require technical assistance
- Preventative maintenance schedules
- Stock of spare parts

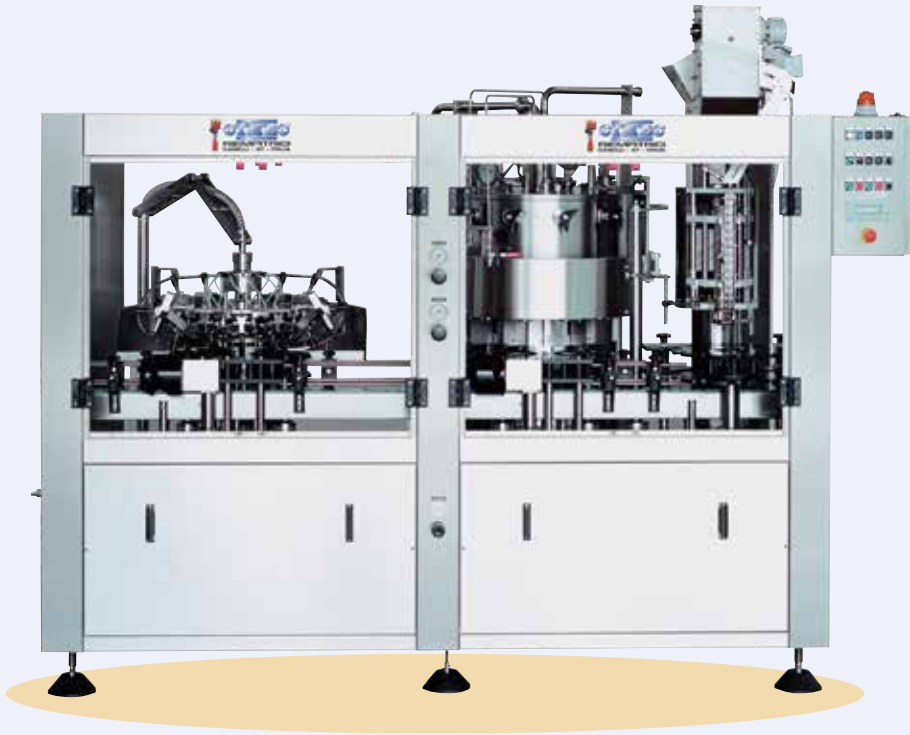

MONDIAL SERIES

The Mondial series is suitable for the precision filling of still products such as cider, fruit juice, wine, spirits, water, vinegar and oils. Filling can take place through any of the following methods, depending on the individual characteristics of the product:

- Gravity
- Low pressure
- Vacuum – low or high

DPS Valve with 'Low oxygen pick-up'

AMERICA SERIES

CIMEC are market leaders in the production of isobaric filling machines for carbonated products, including beer, cider, water, wine and various soft drinks. They design and manufacture a wide range of specialist precision filling valves to suit the individual characteristics of the product. For example, the low oxygen pickup DPS valve for beer, achieved a dissolved oxygen level range of between 10 and 50 parts per billion across a range of beer types, as trialled by CBOK Chemical & Biochemical Research Centre in Belgium.

The DPS valve includes the following functions:

1. Pre-evacuation to remove oxygen
2. CO₂ injection
3. 2nd pre-evacuation
4. Pressurising with CO₂
5. Counter pressure filling
6. Degassing/sniffling

Please see our website for case studies.

With us you'll notice the difference.

“ We have been impressed with the level of training we received and the quality of the installation. The new bottling line has changed the game for us. We are now trying to get other parts of our business to the quality of the bottling. We have recommended Vigo to other breweries on the back of the service we have enjoyed.”

Andrew Cooper
co-founder of The Wild Beer Co

When your loyal followers demand more than you can bottle, something has to give and it needn't be your peace of mind. Bottling by hand or with a semi-automatic filling machine served its purpose, but the time has come to step up to the next level of production.

HELPING YOU TO THE NEXT LEVEL

This is where we can help. Increasing production can be daunting. It's an investment not to be taken lightly and the right advice and support is vital.

For over 10 years we've been helping businesses like yours to meet demand and grow by supplying and installing automatic filling lines.

Our approach is comprehensive. Every line we supply is adapted by our engineers to suit specific production needs.

We will discuss your particular requirements with you and use our expertise to offer you a bottling line which incorporates all the technical elements you will need. These can include in-line carbonation, conveying, automatic labelling, flash/tunnel pasteurisation and depalletising.

CAREFULLY CHOSEN

The quality and reliability of our suppliers' equipment and our ability to develop long standing relationships with them are critical to us. We chose CIMEC not only because they have operated at the very top level in international bottling markets for many years but because they offer:

- 30+ years of specialising in the design & manufacture of bottle filling machines
- Well engineered, robust & durable machines
- ISO 9001:2000 (Quality Certification) to meet customer and regulatory requirements in the design and production of bottling machines
- Supplied to renowned producers, e.g., Grolsch and InBev/Interbrew

We look forward to hearing from you about your specific bottling requirements.

Please call us on 01404 892100 and ask us about automatic bottling.

If you prefer to talk face-to-face we would be pleased to visit you or you are welcome to visit us. To arrange a visit please call 01404 892100.
