

INSTRUCTIONS FOR USE OF SACCHARIN POWDER

Stock Codes: 94376

100g of saccharin powder dissolved in warm water to make a volume of 500ml will give a 20% saccharin solution.

This solution should be stored in an airtight bottle in a cool dark place, ideally in a refrigerator.

The solution should be added to taste.

As an indication, a level of around 1ml of this 20% solution per 10 litres of cider will give a medium sweetness.

If sweetening small volumes of cider the use of a calibrated syringe to measure the solution will permit more accurate dosing.

N.B: There is a UK legal maximum limit of 80mg of saccharin per litre of cider.

These notes are given for purposes of guidance and users of this product must satisfy themselves that they are compliant with any current regulations. In some circumstances there may be a requirement that saccharin is declared as an ingredient on the product label.
